FORMS

Soffits

Door headers

Window channels

Curtain walls

Shaft walls

Office front

Inside corners

Outside corners

Light coves

Columns of any size or
shape

Single and multi-step
horizontal details

Architectural Forms' core business is the production of prefabricated drywall forms. Our forms can be molded to an endless number of specifications. In addition to prefabricated drywall we also prefabricate framing. Our product will leave you wondering how you ever worked any other way!

Superior Finish

Certain shapes just can't be made in the field with the consistent quality of our product. Even for the simple corners that you might be able to keep straight by installing with a laser guide, the paint will give away the difference between paper and compound. Our product solves this finish issue.

Fewer Call Backs

We have all been there, but now we don't have to go back! No corner beads and no joint compound means you won't be called back for cracking that occurs when materials expand and contract at different rates.

Easy To Repair

If you have repaired a dented metal corner, you know that even if the cracking does not extend to the whole bead you will have to replace the bead, re-tape, re-compound, and finally paint the affected area. With our patch kit, simply sand, apply the patch kit, and paint!
